

CROW 6 Upgrade (2025 Release)

May 21, 2026 CUF
Patrick DeLassus

Project Overview

High-Level Information

Description & Purpose

- This project is to upgrade CROW to v6x. This being a modern Web only user interface which means the Windows Fat client will no longer be supported. It includes a conversion of functional elements of both the CROW 5 FAT client and web client and numerous enhancements in functionality, particularly regarding the User Role framework. This is a replacement of both the CROW5 web client and Fat client

Benefits (external and internal)

- Requested enhancements identified by users will be included in this upgrade
- Enhancements to the current application which allows for more stability and sustainability as we move to a web user interface.

Project Scope

In Scope

Black start Unit Sortable Column

Add a "Black Start" column after Voltage Class to the Generation Request Summary Equipment Table. This column will be sortable (the only column that is sortable in this grid).

Additional unit properties

Additional fields related to unit properties: Fuel Switching Capability (true/false), Alternate Fuel (free form), Min Design Temperature (free form in case we get N/As), Latitude, Longitude

Equipment Request Type by Priority Lookup Table

Allow informational constraint on planned priority for all categories

Overlapping rule in noncontinuous outages

Change period overlap validation to use actuals if they exist, otherwise planned

Overlapping outages rules

Make conflicts checks warnings for all users

Operated by is default

When creating a new role, adding business unit privileges, I'd like Equipment Operated by be the default option, rather than Equipment Owned By

In Scope

Disconnect GSP

Lookup table needs to be updated to allow Disconnects to be submitted as a GSP ticket.

Proposed Withdrawn

Any outage (transmission or generation) that is in proposed status for 30 calendar days should automatically set to withdrawn with reason "This outage has been proposed for 30 days. Per outage coordination methodology, it has been withdrawn."

OOS vs HLW in Noncontinuous

Add profile editability of constraints, such that profile constraint code can differ from requested equipment

Duplicate Button

Do not adjust dates when duplicating an outage request

Planned start default setting

Add a privilege "Default New Start Date to Today". If a user has this privilege, default outage request start date to today.

Highlight the 'Change Requests' Tab

Highlight change request tab if there are pending change requests. Also include the detailed What's changed diff

In Scope

Global Navigation

F6 keystroke should navigate to an outage request by ID, regardless of the page you are on.

Link outages

Add Linked outage requests to outage form. Default the original outage request when duplicating.

PC/MC Notification

Add a checkbox filter to the notification form to filter request if the Potential Challenge or Manual Commitment is checked. This filter will only be available for users that can see outage studies (formerly fat client users only, but a View Study Tab will be added to the list of privileges).

Updating Completed Outages

Give users the ability to submit change requests to outages that are completed - only allowing them to update Requestor Notes and Cause Code. These change requests should be automatically approved.

Additional Information For This Release

- Default in V6
 - Additional file formats available to be attached to outage tickets.
 - Additional messages at time of submission that might cause errors vs at the time of implementation
 - Additional columns for cause code/reason to the index page
- Out of Scope (Not Included in this release)
 - Maintenance Margin posting in CROW
 - Maintenance Margin outage waitlist
 - Passive approval for outage extensions
 - Changing planned outages to 45 day prior to the start of the month requirement.
 - Excel upload of outage schedules

Stakeholder Impacts

What Members Can Expect

Member Impacts	• Member testing is in progress.
Needed from Members	• N/A
Stakeholder Resources	• CROW UI Guide should be available in the CUF project folder. • Outage Coordination – CROW CBT will be available in May. • MIPO has been posted to the CUF project folder.

Timeline

Deliverable	Current Start	Current Complete
Requirements	5/12/25	8/29/25
Development (Equinox)	7/18/25	2/27/26
Internal/Integration Testing	2/27/26	4/15/26
Member Testing in ITE	4/16/26	6/12/26
Training	4/24/26	4/24/26
QA (Cool Down Period)	6/9/26 (Previously was 6/12/26)	6/26/26
Production	6/29/26	6/29/26

Key Takeaways

Next Steps	Details
Communication Touch-points	• CROW UI Guide should be available. • MIPO has been placed in the CUF project folder.
Upcoming Milestones	• Outage Coordination – CROW CBT will be available in May. • Member Testing is in progress.
Action Items	• None at this time
